# **Stable Isotopes as Groundwater Discharge Tracers: Recent Developments**

Guest Editors:

## Dr. Jorge Jódar Bermúdez

Centro Nacional Instituto Geológico y Minero de España, Consejo Superior de Investigaciones Científicas (IGME-CSIC), Zaragoza, Spain

### Prof. Dr. Albert Soler

Grup MAiMA, SGR Mineralogia Aplicada, Geoquímica i Geomicrobiologia, Departament de Mineralogia, Petrologia i Geologia Aplicada, Facultat de Ciències de la Terra, Universitat de Barcelona (UB), Barcelona, Spain

Deadline for manuscript submissions:

closed (20 May 2025)

## **Message from the Guest Editors**

Stable isotopes are powerful tools for characterizing both the behavior and processes in groundwater systems. They are also useful for quantifying water and solute exchanges between surface and groundwater compartments, driven by various hydrological processes, from precipitation to groundwater discharge. The information obtained helps understand the dynamics of aquifers, including their recharge, flow patterns, age and vulnerability to contamination. This knowledge is essential for effective groundwater management and sustainable use of water resources.

In this Special Issue of *Water*, we encourage submissions describing the application of stable isotopes to explore the role of different hydrological and hydrogeochemical processes driving aquifer behavior in terms of the isotopic content in groundwater.

# **Message from the Editor-in-Chief**

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological scientific and domains interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
