submissions:

closed (31 March 2020)

Message from the Guest Editors

Dear Colleagues,

This Special Issue is devoted to geomorphological studies on coastal dynamic and evolution. Results of field studies, observations, and surveys on morphological changes of the shoreline and/or dune system at different time scales, from hours, days, to months and years, as well as historical coastal evolution investigations, carried out by means of aerial photos and/or satellite images, and research results concerning coastal changes at scale of decades/centuries, linked to past and future sea level variations and/or land tectonic movements, are welcome. Study cases have to investigate relatively large spatial areas, i.e., coastal sectors of tens of kilometers. Last, investigations on coastal wave climates and the characterization of marine storms in a context of climate change scenarios are also of interest.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Water Science and Technology)
