Water Quality and Ecological Aspects of Aquatic Ecosystems Influenced by Agricultural Activity

Guest Editor:

Dr. Richard Lizotte

USDA ARS National Sedimentation Laboratory, Oxford, MS, USA

Deadline for manuscript submissions:

closed (20 March 2021)

Message from the Guest Editor

Agriculture is necessary for providing a growing population with food, fiber, and fuel. Agriculture itself is dependent on water and proper management of water resources, such as water quality. In agricultural watersheds, water quality is a component to maintaining healthy ecosystems. Functional aquatic ecosystems provide valuable services such as habitat, nutrient cycling, and productivity. Despite recent advances in our understanding of agricultural impacts on water quality as well as mitigating those impacts, critical knowledge gaps continue to exist. We need to better understand links in changes in water quality and their broader ecological effects on aquatic ecosystems as a result of agricultural activity. This Special Issue seeks to highlight novel, innovative studies that utilize monitoring, modeling, or ecological asessment techniques to examine these linkages and predict the implications for water quality and aquatic ecosystems within agriculturally influenced watersheds. Contributions will preferably use a variety of techniques and will emphasize the innovative apects and generalizable insights derived from the study.

IMPACT FACTOR 3.4

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological scientific domains and interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
