Deadline for manuscript  
submissions:

**closed (1 April 2022)**

### Message from the Guest Editors

Due to their wide use and incomplete elimination, emerging pollutants have been frequently detected in various aquatic environments. Although the concentrations of these pollutants are generally found at low levels, their presence is considered to pose a threat to aquatic organisms and human health. However, the occurrence and risks of emerging pollutants in tap water and related water sources is still largely unknown. There is also limited information available on the removal, transportation, and transformation of aqueous emerging pollutants. Given that the emerging pollutants in drinking water may threaten human health, special attention should be paid to these pollutants [...]

Recherche Scientifique (CNRS),  
University of Toulouse, campus  
ENSAT, Auzeville Tolosane,  
France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
