## Improving Flood Detection and Monitoring through Remote Sensing

Guest Editors:

**Dr. Alberto Refice**

**Dr. Domenico Capolongo**

**Dr. Marco Chini**

**Dr. Annarita D'Addabbo**

Deadline for manuscript  
submissions:

**closed (30 April 2021)**

### Message from the Guest Editors

Dear Colleagues,

Measures to increase defenses against floods and reduce flood damages are more and more urgent, as floods are emerging as one of the most frequent and incisive disasters due to climate change. Gaining sufficient knowledge about the extent, duration, and more generally, time evolution of flood events is a necessary step toward this goal. This information can be used to draw maps of expected return periods for events of a certain magnitude.

Remote sensing is traditionally recognized as one of the most cost-effective technologies to gain detailed information about large areas of the earth surface. Its use in the monitoring of floods and inundations dates back to the first sensors and algorithms. In recent years, the wider availability of images from both radar and optical sensors, their low to null cost, and their tight and reliable acquisition schedules are opening the path to unprecedented levels of detail about inundation events, both on urbanized and remote areas.

## Editor-in-Chief

### Dr. Jean-Luc PROBST

Laboratory of Functional Ecology  
and Environment, Centre  
National de la Recherche  
Scientifique (CNRS), University of  
Toulouse, Campus ENSAT,  
Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
