Deadline for manuscript  
submissions:

**closed (31 October 2021)**

### Message from the Guest Editor

Fluvial processes and fluvial denudation, including both chemical and mechanical processes, are of high relevance for Earth surface and landscape development, as well as the fluvial transfer of solutes, nutrients, and sediments from headwater systems through the main stems of drainage basin systems to the World Ocean. Fluvial processes and fluvial denudation are controlled by a range of environmental drivers, and can be significantly affected by anthropogenic activities. A better understanding of the possible effects of the ongoing and accelerated environmental changes on present-day fluvial and denudational processes requires systematic and quantitative studies (including environmental monitoring) on the actual drivers of these processes. Only if we have an improved knowledge of the drivers and quantitative rates of contemporary fluvial and denudational processes, [...]

## Editor-in-Chief

### Dr. Jean-Luc PROBST

Laboratory of Functional Ecology  
and Environment, Centre  
National de la Recherche  
Scientifique (CNRS), University of  
Toulouse, Campus ENSAT,  
Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
