submissions:

**1 April 2020**

### Message from the Guest Editor

Fluvial processes and fluvial denudation, including both chemical and mechanical processes, are of high relevance for Earth surface and landscape development, as well as the fluvial transfer of solutes, nutrients, and sediments from headwater systems through the main stems of drainage basin systems to the World Ocean. Fluvial processes and fluvial denudation are controlled by a range of environmental drivers, and can be significantly affected by anthropogenic activities. A better understanding of the possible effects of the ongoing and accelerated environmental changes on present-day fluvial and denudational processes requires systematic and quantitative studies (including environmental monitoring) on the actual drivers of these processes. Only if we have an improved knowledge of the drivers and quantitative rates of contemporary fluvial and denudational processes, [...]

## Message from the Editor-in-Chief

The relevance of water in human development and sustaining life, fuels general and scholarly interest in the world's water resources. A better understanding of all aspects of water and its relation to food supply, energy production, human health, and the functioning of ecosystems is key in managing this precious resource in a sustainable, efficient and equitable manner. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High visibility:** indexed by the **Science Citation Index Expanded** (Web of Science), Ei Compendex and other databases.

**CiteScore** (2018 Scopus data): **2.66**, which equals rank 39/203 (Q1) in 'Water Science and Technology' and rank 34/204 (Q2) in 'Aquatic Science'.
