## The Management of Eutrophication, Harmful Algal Bloom and Ecological Health in Freshwater Ecosystems

Guest Editors:

**Prof. Dr. Soon-Jin Hwang**

Department of Environmental  
Health Science, Konkuk  
University, Seoul 05029, Republic  
of Korea

**Prof. Dr. Min-Ho Jang**

Department of Biology  
Education, College of Education,  
Konju National University,  
Gongju 32588, Republic of Korea

**Dr. Jongkwon Im**

National Institute of  
Environmental Research, Han  
River Environment Research  
Center, Gyeonggi-do 12585,  
Republic of Korea

Deadline for manuscript  
submissions:

**25 October 2024**

### Message from the Guest Editors

Dear Colleagues,

Freshwater is a critical resource for the survival of human beings and other biota. However, freshwater ecosystems globally are facing unprecedented threats induced by a broad range of human activities. Moreover, climate change is aggravating these threats in unpredictable ways. Eutrophication, which causes the occurrence of harmful algal blooms, is the most common problem faced by freshwater systems. Cyanobacteria blooms produce harmful materials, including toxins and off-flavor substances, and are regarded as potential hazards, particularly with respect to water resource management and ecosystem health.

This Special Issue was developed with the aim of highlighting studies aiming to improve scientific understanding and strategies for sound aquatic ecosystem management and services for researchers, decision-makers, and stakeholders. We seek research papers on various aspects of eutrophication, harmful algae, and ecosystem health in relation to land use, watershed management, climate change, and restoration. [...]

## Editor-in-Chief

### Dr. Jean-Luc PROBST

Laboratory of Functional Ecology  
and Environment, Centre  
National de la Recherche  
Scientifique (CNRS), University of  
Toulouse, Campus ENSAT,  
Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
