Hydrological Modelling and Hydrometeorological Extreme Prediction

Guest Editors:

Dr. Lei Ye
School of Civil & Hydraulic Engineering, Dalian University of Technology, Dalian, China

Prof. Dr. Shuang Zhu
School of geography and Information Engineering, China University of Geosciences, Wuhan 430078, China

Dr. Weihong Liao
China Institute of Water Resources and Hydropower Research, Beijing 100044, China

Deadline for manuscript submissions:
closed (30 June 2023)

Message from the Guest Editors

Hydrological modeling plays an extremely important role in the water resources management, agricultural irrigation, climate and ecological environment change research. Hydrological processes are influenced by complex weather and non-linear infiltration mechanisms, which are difficult to model and thus, reliable hydrological modeling remains a challenge. Research hotspots include large sacle flood forecasting, remotely sensed data use, hydrometeorological extreme analysis, and hydrological simulation in areas with no observation data. Recently new technologies and methods have also been used in hydrological simulation, such as satellite remote sensing technology, big data mining technology, artificial intelligence, etc. We sincerely invite the authors to contribute original review and research manuscripts focused on developing and improving hydrological modeling and investigating their application in water cycle as well as hydrometeorological extremes under changing climate.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.
Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
