CITESCORE 5.8

Simulation of the Hydrological, Thermal and Energy Budgets

Guest Editors:

Prof. Dr. Claudio Cassardo
Department of General Physics "Amedeo Avogadro", Faculty of Sciences, University of Torino, Via Pietro Giuria 1, 10125 Torino, Italy

Dr. Valentina Andreoli
Dept. of Physics, Univ. of Turin, via P. Giuria 1, 10125 Torino, Italy

Dr. Sujeong Lim
Center for Climate/Environment Change Prediction Research (CCCPR), Ewha Womans University, 52 Ewhayeodae-gil, Seodaemun-gu, Seoul 03760, Korea

Deadline for manuscript submissions:
closed (10 August 2022)

Message from the Guest Editors

Dear Colleagues,

Recently, the scientific community has recognized the importance of land surface as a key component of the climate system. The soil represents a source term for hydrologic and energy budgets, as it partitions incoming net radiation into sensible and latent heat flux, and conductive heat flux, and redistributes the precipitation into evapotranspiration, surface or underground storage, runoff, and gravitational drainage. Latent heat flux, being proportional to evapotranspiration, links energy and hydrologic budgets. With these premises, the assessment of the energy and hydrologic budgets is crucial. However, only a few cases of extensive field campaigns using in situ measurements have been carried out to measure soil temperature and moisture, or turbulent fluxes. Satellite measurements may allow for extensive measurements of soil temperature and moisture in the skin layer, but not in the root zone, thus making it very difficult to evaluate the budgets. [...]

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.
Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
