## Sustainable Future: Renewable Energy in Water and Wastewater Treatment

Guest Editor:

**Prof. Philip Davies**

Professor of Water Technology,  
School of Engineering, University  
of Birmingham, Edgbaston,  
Birmingham B15 2TT, UK

Deadline for manuscript  
submissions:

**closed (15 May 2019)**

### Message from the Guest Editor

Dear Colleagues,

Water and waste-water treatment typically consume a significant percentage of national energy supplies, with corresponding impacts on carbon emissions and climate change. Energy usually constitutes a major operating cost of water service providers. For some arid countries, seawater desalination may represent the most energy-intensive industrial sector. The use of sustainable energy to power treatment processes is an attractive alternative to fossil fuels, but there are barriers to the penetration of renewables, such as wind and solar. To meet increasing water demands, there is an ever-growing need to enhance the energy efficiency of water treatment, and to improve the overall effectiveness of water-energy systems as a whole. Reflecting the growing variety and ambition of research activities in this theme, this Special Issue will welcome contributions in areas including (but not restricted to): Novel processes for harnessing renewable energy in water and wastewater treatment; [...]

## Editor-in-Chief

### Dr. Jean-Luc PROBST

Laboratory of Functional Ecology  
and Environment, Centre  
National de la Recherche  
Scientifique (CNRS), University of  
Toulouse, Campus ENSAT,  
Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
