Message from the Guest Editors

Dear Colleagues,

We are pleased to announce a call for contributions on topics related to 'River flow monitoring: needs, advances and challenges', for submission to a Special Issue of the journal *Water*. River flow monitoring is of paramount importance. In order to plan water resources it is needed to have timely, accurate data with an appropriate temporal and spatial resolution; however, data are not always available.

This Special Issue seeks to publish articles that demonstrate needs, advances and challenges on river flow monitoring, and those that explain the need of data and how to collect it. We especially encourage papers that present novel techniques that improve the quality of data but also simplify installation and maintenance, as well as devices that are proven to work under extreme events.

Of particular interest are research articles and commentaries related to river flow monitoring and the following aspects:

- Current monitoring technologies: improvements and challenges;
- [...]

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
