Message from the Guest Editors

Dear Colleagues,

Tight links exist between processes and decisions in water, energy and land systems. Integrated assessment is therefore crucial for designing effective policies that avoid trade-offs and achieve synergies across sectors. The objective of this Special Issue is to improve the knowledge basis on integrated assessment approaches and tools for examining the water–energy–land nexus. Contributions will feature all three systems (water, energy and land) and span a range of spatial and temporal scales relevant for policy-making. We are particularly interested in analyses that examine and discuss solutions to water–energy–land nexus challenges.

Sincerely,

Dr. Simon C. Parkinson

Dr. Edward Byers

Dr. Edo Abraham

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
