Deadline for manuscript  
submissions:

**28 February 2021**

### Message from the Guest Editor

Dear Colleagues,

Water, energy, and food are highly interconnected. Despite this fact, the sectoral fragmentation of analytical and policy tools addressing these sectors remains widespread. A water–energy–food–ecosystems (WEFE) nexus perspective offers advantages to disentangle the multifaceted interconnections between water, energy, food, and ecosystems. A proper understanding of the WEFE nexus is crucial to address trade-offs and to identify synergetic policy interventions, which in turn are essential to advance towards the sustainable development goals. For this Special Issue, we invite papers examining the WEFE interlinkages, from the local to the global scales, and exploring development pathways that reconcile short-term objectives with long-term sustainability. Questions to be considered include:

- What analytical tools are needed to identify WEFE interlinkages, assess trade-offs, and synergies and support policy interventions that enhance sustainability?
- [...]

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:**—free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed by the [Science Citation Index Expanded](#) (Web of Science), [Ei Compendex](#) and [other databases](#).

**CiteScore** (2019 Scopus data): **3.0**, which equals rank 82/217 (Q2) in 'Water Science and Technology', rank 88/219 (Q2) in 'Aquatic Science' and rank 147/679 (Q1) in 'Geography, Planning and Development'.
