Engineering Department, Yale
University, New Haven, CT 06511,
USA

Message from the Guest Editors

This Special Issue of *Water* highlights applied aspects of the challenges associated with climate change, population pressures, and water. The rise in temperatures and the number of people consuming water has created unprecedented challenges for water managers on the planet. This Special Issue will focus on the many associated issues surrounding drinking water, irrigation, and recreation. Articles should focus on a range of issues and solutions from technologies, to policies, to sociology, to economics.

Deadline for manuscript

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
