Deadline for manuscript submissions:

closed (21 December 2018)

## **Message from the Guest Editors**

Water is one of the most critical resources for sustainable agricultural development worldwide and thus plays an important role in global food security. According to FAO, irrigated agriculture represents about 70% of the total water withdrawals and provides 40% of the global food production. Socio-economic pressures and climate change impose restrictions to water allocated to agriculture. Growing competition among different water uses, together with increased water vulnerability and scarcity because of climate change, will reduce water availability in agriculture. Nevertheless, global food demand is projected to increase until mid-century, so that improved water management is a priority to meet water and food security. Moving towards sustainable water management in agriculture involves not only adoption of tecnological improvements but also changes in the social and institutional frameworks. Efforts are needed to assess water-food interlinkages, support the design of synergetic policy interventions and promote water reuse and transition to a circular economy.

## **Message from the Editor-in-Chief**

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological and scientific domains interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

#### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
