Deadline for manuscript
submissions:

closed (31 August 2022)

Message from the Guest Editors

With the continuous improvement of point source pollution control, non-point-source pollution has become the main cause of water pollution. Non-point-source pollution has the characteristics of wide distribution, randomness, latency and lag, which leads to difficulties in pollution monitoring, evaluation, and management control. In view of the current problems such as lack of technology for the real-time monitoring of non-point-source pollution, the lag of data collection, and low priority placed on pollution control, a [Special Issue](#) on “Point-Source and Diffuse Water Pollution” is being set up to promote the sharing of technology and methods, the discussion of problems, and encourage cooperative scientific research in this field through exchanges.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Water Science and Technology)
