Advances in Water Distribution Networks

Guest Editors:

Prof. Dr. Giuseppe Pezzinga

Dipartimento di Ingegneria Civile e Architettura, Università di Catania, Via Santa Sofia, 64, 95123 Catania, Italia

Prof. Dr. Enrico Creaco

Department of Civil Engineering, Università di Pavia, Pavia, Italy

Deadline for manuscript submissions: **closed (28 May 2018)**

Message from the Guest Editors

In the last few decades, the research has deepened the well established topics related to the quantitative simulation and optimization of water distribution systems, and it has broadened to water quality aspects, such as those concerning the network capacity in terms of residual disinfection and its protection from the effects of accidental or terroristic contamination events. This Special Issue aims to point out the recent trends on water distribution modeling, regarding the opportunities introduced by technical progress for the simulation, design, and management of water distribution systems. Contributions are welcome on the following topics: simulation and optimization of water distribution systems. including pressure driven models, leakage detection and control, operation, pipe design, control valves, microturbines, pump scheduling, energy optimization, etc.; unsteady flow simulation, including unsteady friction, viscoelastic pipe behavior, transient cavitating flow, etc.; and water quality, including optimal placement of sensors for contaminant detection, reaction to contamination, network recovery after contamination, etc.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological scientific domains and interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
