Message from the Guest Editors

Dear Colleagues,

Savannas, woodlands, and shrublands are expanding globally in a process described as “woody plant encroachment”. Change in vegetation physiognomy from herbaceous to woody dominance has important but not necessarily well understood implications for the water cycle. This Special Issue is focused on providing a state-of-the-art understanding and description of our current understanding of ecohydrology issues in savannas and woodlands. We are particularly interested in papers that provide a comprehensive synthesis of a topic related to ecohydrology of savannas and woodlands.

Prof. Dr. Bradford Paul Wilcox

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
