closed (30 September 2019)

Message from the Guest Editors

Compared with open waters and rivers, ecological assessment of vegetation-dominated wetlands is globally more limited. With the advent of the UN Sustainable Development Goals (SDGs) it is timely to bring together a collection of experiences and open opportunities for new approaches to the ecological assessment of wetlands, including how these relate to national and international policy and practice. Papers are invited on wetland assessments that span biophysical, social and policy dimensions, and the connection among them. Submissions on new developments and modes of assessment are welcome, including those at the catchment or regional scale. Papers are encouraged that consider how baselines are set across wetland types, and the quantitative and qualitative evaluation of pressures. We invites submissions that report primary research as well as more conceptual papers that address cultural, regulating and provisioning ecosystem services and how these can be assessed. This makes submissions reporting traditional use and tacit assessment especially welcome.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Ei Compendex](#), [GEOBASE](#), [GeoRef](#), [AGRICOLA](#), [AGRIS](#), [CAPlus / SciFinder](#), [Inspec](#), and many other databases.

Journal Rank: [JCR](#) - Q2 (*Water Resources*) / [CiteScore](#) - Q1 (*Geography, Planning and Development*)
