Risks from Emerging Pathogenic Organisms in Water

Guest Editor:

Prof. Dr. James A. VanDerslice
Division of Public Health,
Department of Family and
Preventive Medicine, University of
Utah, Salt Lake City, UT 84132,
USA

Deadline for manuscript
submissions:
closed (30 November 2021)

Message from the Guest Editor

The rapid spread of SAR-CoV-2 across the globe has highlighted the vulnerability of society to emerging pathogens. The focus of this issue of *Water* will be on such threats, including antibacterial-resistant organisms, novel viruses (such as SARS-CoV-2), amoeba, opportunistic pathogens, as well as organisms for which health risks from ingestion or inhalation (e.g. from showering) are poorly understood. We encourage submissions that focus on the presence or potential for such agents in drinking water or source waters, as well as the expected or observed impacts in human populations. Similarly, investigations regarding the contamination of source waters and input to source waters (e.g. wastewater) will be considered as long as the work clearly links the results to the impacts (potential or actual) on drinking water quality and/or human health. Fate and transport or risk assessment models would also be of interest.[...]

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
