Fish Passage at Hydropower Dams 2.0

Guest Editors:

Dr. Ismail Albayrak

Laboratory of Hydraulics, Hydrology and Glaciology, ETH Zurich, 8093 Zurich, Switzerland

Prof. Dr. Laurent David

Institut Pprime, CNRS- Université de Poitiers - ENSMA, UPR 3346, 11 Boulevard Marie et Pierre Curie, TSA 51124, 86073 Poitiers, CEDEX 9, France

Dr. Ana Teixeira da Silva

The Norwegian Institute for Nature Research (NINA), P.O. Box 5685 Torgard, 7485 Trondheim, Norway

Deadline for manuscript submissions: closed (31 May 2023)

Message from the Guest Editors

Hydropower dams represent barriers for animal movement, in both the upstream and downstream directions. For instance, fish can be blocked or delayed during their spawning migration and can be subjected to injury or death when passing turbines, spillways, or bypasses during their downstream migration, resulting in cumulative negative impacts on individual and population levels.

Fish-friendly turbines, collection systems, sensory barriers, mechanical and behavioral barriers, physical barriers, and fish-friendly operations are widely known technological concepts that can be implemented to mitigate the negative impacts of hydropower dams by protecting and guiding fish that are migrating downstream. Compared to downstream fish passage technologies, upstream fish passage technologies are well advanced but still need to be adapted for multi-species of different biomechanical requirements and attraction flow at the entrance [...]

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological scientific domains and and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
