University of Illinois, USA

Assoc. Prof. Dr. Ryan Sriver

Department of Atmospheric
Science, University of Illinois, USA

Deadline for manuscript
submissions:

closed (20 March 2019)

Message from the Guest Editors

Hydroclimatic extremes such as floods and droughts affect all aspects of our lives and the environment, including energy, hydropower, agriculture, transportation, urban life, and human health and safety. For many geographic regions, climate projections indicate that the risk of increased flooding and/or more severe droughts will be higher in the future than today. On the other hand, the large uncertainty of projected hydroclimatic extremes makes it very challenging to design planning and management measures that would account for their trends. There is an increasing need for water researchers and practitioners to address these concerns.

This Special Issue calls for innovative manuscripts with a focus on projected hydroclimatic extremes and their impacts. Topic examples include the following:

- Uncertainty analysis and/or quantification of projected hydroclimatic variables
- Urban floods, droughts, and resiliency planning for extreme events
- Water supplies
- Effects of climate change on water quality
- Other (e.g., socioeconomic, demographic, regulatory, planning and management) aspects of projected floods and droughts

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
