## Assessment of Different Contaminants in Freshwater: Origin, Fate, and Ecological Impact

Guest Editors:

**Prof. Diana M. P. Galassi**

University of L'Aquila,  
Department of Life, Health and  
Environmental Sciences, Via  
Vetoio, Italy

dianamariapaola.galassi@  
univaq.it

**Dr. Tiziana Di Lorenzo**

Research Institute on Terrestrial  
Ecosystems CNR—National  
Research Council of Italy, Via  
Madonna del Piano, 10, 50019  
Sesto Fiorentino (FI), Italy

tiziana.dilorenzo@cnr.it

**Prof. Grant Hose**

Department of Biological  
Sciences, Macquarie University,  
NSW 2109, Australia

grant.hose@mq.edu.au

Deadline for manuscript  
submissions:

**30 April 2020**

### Message from the Guest Editors

Freshwaters are subject to frequent and intense large-scale disturbances. Pollution, irrigation withdrawal, alteration of freshwater flows, road construction, aquifer mining, surface water diversion, desertification, wetland drainage, soil erosion in agriculture, deforestation, and dam building have led to some irreversible species losses and severe changes in community compositions of freshwater ecosystems. Pollution represents one of the most relevant impacts on freshwater environments, ranging from surface water bodies to groundwater and transitional habitats between surfacewaters and groundwaters. The origins and fates of pollutants are different, and depend on the pollutants considered: including fertilizers, together with pesticides, in agricultural areas; heavy metals, chlorinated organic compounds, and polycyclic aromatic hydrocarbons (PAHs) predominantly deriving from industrial and urban settlements; as well as microplastics, which are increasing in concentration in freshwater bodies, and which, together with pharmaceuticals, personal care products (PCPs), and endocrine-disrupting compounds (EDCs), constitute the emerging contaminants in freshwater systems.

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed by the **Science Citation Index Expanded** (Web of Science), Ei Compendex and other databases.

**CiteScore** (2018 Scopus data): **2.66**, which equals rank 39/203 (Q1) in 'Water Science and Technology' and rank 34/204 (Q2) in 'Aquatic Science'.
