Deadline for manuscript  
submissions:

**closed (1 April 2019)**

### Message from the Guest Editors

Dear Colleagues,

Integrated Water Resources Management (IWRM) has become a global paradigm for the governance of surface, coastal, and groundwaters. International bodies, such as the United Nations, the Global Water Partnership, and the European Union, have taken the lead to promote IWRM principles, and countries worldwide, both in the Global South and the Global North, have undertaken reforms to implement these principles and to restructure their domestic or regional water governance arrangements. However, the international transfer of IWRM principles raises a number of theoretical, empirical and normative questions. These relate to the *causes*, *process* and *outcomes* of policy transfer in the field of IWRM.

This Special Issue invites contributions tackling any of these questions. However, manuscripts which take a comparative perspective and/or make use of theory and concepts are particularly welcome. Submissions may focus on specific aspects of IWRM, such as river basin planning, integration between water related sectors, economic valuation, public participation including gender inclusion, or take a holistic approach.

France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
