Grand Forks, United States

Deadline for manuscript
submissions:

closed (31 October 2020)

Message from the Guest Editor

Dear Colleagues,

Understanding groundwater–surface water interaction from local to global scales is essential for protecting water supply, ecological services, natural habitat, water quality, and environmental resilience. Coupled together with broadly available topographic, soil, land cover–land use, hydrographic, remote sensing, and other spatial data, geographic analysis tools provide the means to discover mechanisms and processes that maintain the interaction of groundwater with precipitation, evapotranspiration, and runoff. This Special Issue highlights the theories, methods, and case examples of how spatial analysis at variable scales—from local to regional to global—can be used to explore and characterize the connections of groundwater and surface water in diverse natural and human-developed environments.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
