## Advances in In Situ Biological and Chemical Groundwater Treatment

Guest Editors:

**Prof. Dr. Sabrina Saponaro**

Department of Civil and  
Environmental Engineering,  
Politecnico di Milano, Milan, Italy

**Dr. Snežana Maletić**

Department of Chemistry,  
Biochemistry and Environmental  
Protection, Faculty of Sciences,  
University of Novi Sad, 21000  
Novi Sad, Serbia

**Dr. Elena Sezenna**

Department of Civil and  
Environmental Engineering,  
Politecnico di Milano, Milan, Italy

Deadline for manuscript  
submissions:

**closed (31 January 2020)**

### Message from the Guest Editors

The increasing availability of scientific studies has progressively drawn attention to in situ remediation technologies for groundwater. Most of them are innovative compared to the “pump and treat” approach, and allow to reduce the remediation time and to increase remediation sustainability.

Various studies have shown that pesticides, industrial chemicals, solvents, fuel additives, and nitrate occur in groundwater. Recently, micropollutants originating from pharmaceuticals and personal care products and endocrine-disrupting compounds have posed an increasing concern.

A number of relevant pollutant mixtures can be present in groundwater as a non-aqueous phase liquid (NAPL), due to very low water solubility. In general, pollutants in a non-aqueous phase can be extremely persistent and the in situ remediation highly demanding.

Contributions are invited for manuscripts referring to innovative in situ technology for groundwater remediation, based on chemical or biological processes, from either traditional or emerging pollutants, and NAPLs.

## Editor-in-Chief

### **Dr. Jean-Luc PROBST**

Laboratory of Functional Ecology  
and Environment, Centre  
National de la Recherche  
Scientifique (CNRS), University of  
Toulouse, Campus ENSAT,  
Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
