Institute of Hydrobiology,
Chinese Academy of Sciences

Deadline for manuscript
submissions:

closed (15 December 2022)

Message from the Guest Editors

Dear Colleagues,

There is an increasing concern around the world about the potential effects that human pressure and climate change can introduce into the environment of both marine and freshwater ecosystems. The need to increase the capacity to detect, understand, and predict these effects requires developing cost-effective, reliable, and efficient technologies, in order to enable the collection of rigorous scientific data, which would allow determining the current status of the ecosystem.

We welcome contributions dealing with but not limited to the following topics:

- Fisheries' acoustics (stock assessment, spatial distributions, size distributions, etc.);
- Fish behavioral studies (predator-prey interactions, vertical and horizontal migrations, avoidance, etc.);
- Habitat mapping (including bottom sediments, macrophytes, cyanobacterial blooms);
- Applications in aquaculture;
- Ambient noise and soundscape;
- Combination of methods (comparison of acoustic results with other assessment methods);
- Technology, innovations in equipment, and data processing.

Scientifique (CNRS), University of
Toulouse, Campus ENSAT,
Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
