Deadline for manuscript submissions:

closed (31 October 2021)

Message from the Guest Editor

Dear Colleagues,

An aquatic microbial community can be defined as an assemblage of co-occurring and potentially interacting microbes present in a defined habitat in space and time. Despite their small size, microorganisms are key elements in the ecological dynamics of the biosphere. In recent years, with advances in molecular tools, such as high-throughput sequencing, the field of microbial communities in water environments has gained increasing attention, resulting in novel knowledge regarding microbial dynamics and interactions.

Dr. Sandi Orlić

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
