Deadline for manuscript submissions:

closed (30 June 2019)

Message from the Guest Editors

Water pollution is a major global problem. Pollution caused by emerging contaminants (ECs) has been in the spotlight of the scientific community during the last few decades. Among ECs, pharmaceuticals represent an especially worrying class because they are biologically active and their presence in the aquatic environment may cause physiological effects in non-target individuals. Within the global aim on water protection, it is necessary to find out efficient and sustainable ways to remove pharmaceuticals from water.

Submissions of original research or review papers on the removal of medicines from water, either drinking or waste water, by conventional or alternative treatments are welcomed. Subject areas may include, but are not limited to: Activated sludge treatments; Oxidation and advanced oxidation processes; Membrane processes; Adsorption onto activated carbon or alternative adsorbents; Advanced (nano)materials; Bioremediation; Natural treatment systems (wetlands, stabilization ponds, etc.); Generation of transformation products during water treatment; Evaluation of the removal efficiency in percent or toxicity terms; Novel strategies for efficiency enhancement and so on.

Message from the Editor-in-Chief

The relevance of water in human development and sustaining life, fuels general and scholarly interest in the world's water resources. A better understanding of all aspects of water and its relation to food supply, energy production, human health, and the functioning of ecosystems is key in managing this precious resource in a sustainable, efficient and equitable manner. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the **Science Citation Index Expanded** (Web of Science), Ei Compendex and other databases.

CiteScore (2018 Scopus data): **2.66**, which equals rank 39/203 (Q1) in 'Water Science and Technology' and rank 34/204 (Q2) in 'Aquatic Science'.
