Deadline for manuscript
submissions:
closed (30 June 2018)

Message from the Guest Editor

Dear Colleagues,

Hydrology is changing in profound and pervasive ways in watersheds throughout the world, with important implications for erosion and sediment transport. Our ability to study linkages between hydrology and sediment dynamics has advanced considerably over the past few years. This Special Issue seeks to highlight innovative studies that utilize new monitoring, modeling, or analytical techniques to examine these linkages and predict the implications for water quality, river channel morphology, flood risk, human-built infrastructure, or land and water management, policy, and restoration. Contributions will preferably use a variety of techniques and will emphasize the innovative aspects and generalizable insights derived from the study.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
