Message from the Guest Editors

The Special Issue encourages submissions on the interaction of soil hydrology and agriculture in seeking effective management of water and nutrients. We welcome contributions integrating monitoring and modeling components at applicative scales, from field to district scales. The Special Issue will deal with the following major topics: 1. Soil hydrology, water uptake and crop response; 2. Soil hydrology and irrigation management from field to district scale; 3. Soil hydrology and nutrient management.

Specific topics will include (not exhaustively): (1) Monitoring and modeling of the interactions between soil hydrological, plant and atmosphere processes, and agricultural management practices; (2) Soil hydrology for irrigation and fertilizer management, including non-conventional water resources; (3) Soil hydrology and soil tillage; (4) Monitoring and modeling root growth and uptake of water and nutrients; (5) The role of soil hydrology in scheduling irrigation at district scale, under conditions of spatially variable soils; (6) Site-specific management related to spatially variable soil hydrological behavior; (7) Carbon, nitrogen and phosphate dynamics in agricultural soils.
Message from the Editor-in-Chief

The relevance of water in human development and sustaining life, fuels general and scholarly interest in the world’s water resources. A better understanding of all aspects of water and its relation to food supply, energy production, human health, and the functioning of ecosystems is key in managing this precious resource in a sustainable, efficient and equitable manner. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

*Open Access:* free for readers, with article processing charges (APC) paid by authors or their institutions.

*High visibility:* indexed by the Science Citation Index Expanded (Web of Science), Ei Compendex and other databases.

*CiteScore* (2018 Scopus data): **2.66**, which equals rank 39/203 (Q1) in 'Water Science and Technology' and rank 34/204 (Q2) in 'Aquatic Science'.
