Prof. Dr. José Enrique Fernández

Deadline for manuscript submissions: closed (20 August 2023) Irrigation, a key practice for effective agriculture in arid and semi-arid climates, has been associated with crop intensification since ancient times. In conjunction with global climate change, the increase in worldwide population, in industrialization, in standard of living and in irrigated area (with concomitant increases in the use of fertilizers and plant protection products), has increased the use of water resources in agriculture, leading to an increase in their scarcity and/or pollution in many areas.

Precision irrigation, which involves rational irrigation strategies and sensor-based systems (automation and remote sensing) supported by digital technologies, has proven to be an effective tool to materialize sustainable intensive agriculture in areas with water deficit.

In this context, this Special Issue aims to gather new and innovative knowledge, technology and agricultural practices related to precision irrigation, to achieve a resilient, ecologically adjusted and sustainable intensive agriculture suitable to overcome the challenges from global climate change and global population.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
