submissions:

closed (31 May 2022)

Message from the Guest Editors

There have been many changes in urban stormwater management in the last two decades due to the implementation of Low Impact Development and other policies and practices. These include new stormwater treatment practices in response to new planning regulations, changes to community practices relating to stormwater pollution runoff, fertiliser application, animal faeces, and the development of more sustainable vehicles and fuels.

This [Special Edition](#) entitled “Latest Advances in Urban Stormwater Pollution Management” aims to highlight research on improvements in urban stormwater management practices and technologies that have led to reduced stormwater pollution. This can include research studies on the effects of new policies, new catchment management practices, new stormwater treatment devices, advances in computer modelling, and other relevant topics.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
