Groundwater Vulnerability, Risk and Hazard: State of the Art Statistical and Machine Learning Techniques

Guest Editors:

Dr. Rahim Barzegar

Department of Bioresource Engineering, McGill University, Montreal, QC, Canada

Dr. Ata Allah Nadiri

Department of Earth Sciences, Faculty of Natural Sciences, University of Tabriz, Tabriz, Iran

Deadline for manuscript submissions:

closed (20 October 2022)

Message from the Guest Editors

Groundwater resources are under natural and anthropogenic pressures that are threatening their sustainability. It is expected to increase those pressures on the groundwater in the future due to increasing agriculture, industry, urbanization, and the impact of climate change and land use which lead to depletion of the quantity and deterioration of the quality of the groundwater. Therefore, groundwater resources should be protected against threatening factors in order to decrease the vulnerability of the groundwaters and/or preventing before degradation.

Evaluation of groundwater vulnerability, risk and hazard are of particular importance for conservation and management purposes. Several methods and frameworks including overlay, statistical, and process-based simulation along with data-driven methods have been used for this purpose in the last decades. [...]

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
