Public Policy Analysis of Integrated Water Resource Management

Guest Editors:

Prof. Dr. Karin Mirjam Ingold

1. Institute of Political Science & Oeschger Center for Climate Change Research, University of Bern, Bern, Switzerland;

2. Environmental Social Science Department, Eawag, Dübendorf, Switzerland

Prof. Dr. Jale Tosun

Institute of Political Science, Heidelberg University, Bergheimer Strasse 58, 69115 Heidelberg, Germany

Deadline for manuscript submissions:

closed (15 September 2019)

Message from the Guest Editors

Public policy analysis is interested in how policies emerge and develop in order to address societal problems. Issues related to water, such as the contamination of surface waters, floods and droughts, or plastic pollution in oceans are often highly complex, concern different jurisdictions, and involve public and private actors. This complexity is addressed through integrated water management principles; but these principles give room to open questions such as: What are main challenges of policy analysis (research and practice) in terms of multi-level actor involvement (politics), cross-sectoral solutions (policies), and new institutional arrangements (polity)? To answer this question we invite policy research that investigates the potential of innovation and effectiveness in integrated water resource management.

Recherche Scientifique (CNRS),
University of Toulouse, campus
ENSAT, Auzeville Tolosane,
France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
