

## Special Issue

# Hydrogeochemical Characterization and Flow System of Groundwater in Volcanic Aquifers

### Message from the Guest Editor

This Special Issue invites research and review articles on flow system characterization, hydrogeochemistry, and recharge estimation in volcanic aquifers. It particularly welcomes studies using field data, modeling, hydrogeochemical tracers, and interdisciplinary approaches at various scales. **Topics:**

- Groundwater flow dynamics in volcanic terrain;
- Hydrogeochemical characterization and evolution;
- Recharge mechanisms and estimation;
- Surface–groundwater interactions;
- Numerical and conceptual groundwater modeling;
- Groundwater balance studies.

We look forward to receiving your original research articles and reviews.

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
