

## Special Issue

# Global and Regional Flood Risk Modelling and Analysis in Climate Change Scenario

### Message from the Guest Editor

In recent years, climate change and urbanization have led to significant pluvial flood events in a range of countries worldwide. This has prompted the development and implementation of effective and innovative approaches for designing and managing urban stormwater systems. The gradual urbanization process is causing an increase in impervious surfaces, resulting in higher surface runoff and velocity. This, in turn, reduces concentration times of watersheds, leading to increased soil erosion and deteriorating water quality due to intensive contamination. Low-impact development (LID) practices for controlling urban runoff can be considered an effective approach to addressing this concern. These practices aim to enhance urban resilience against flooding risks and ensure environmental interventions that address the changing climate and land use patterns. This Special Issue invites research contributions that present groundbreaking advancements in both experimental and modeling research on LIDs.[...] For further reading, please follow the link to the SpecialIssue Website at: [https://www.mdpi.com/journal/water/special\\_issues/OV30LK11L3](https://www.mdpi.com/journal/water/special_issues/OV30LK11L3)

### Guest Editor

Prof. Dr. Francesco De Paola

Department of Civil, Architectural and Environmental Engineering,  
University of Naples Federico II, Naples, Italy

### Deadline for manuscript submissions

closed (31 December 2024)

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
