

Special Issue

Coupling Analysis of Ecosystem Functions and Water Resources in a Changing Environment

Message from the Guest Editor

This column aims to deepen the scientific understanding of eco-hydrological coupled systems and offer scientific foundations for achieving harmonious coexistence between humans and nature in water resource management and ecological conservation. We sincerely welcome original research articles, reviews, and perspective papers from hydrology, ecology, geography, environmental science, and related interdisciplinary fields.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
