

Special Issue

Aquatic Environmental Pollution and Ecotoxicological Studies

Message from the Guest Editors

The occurrence of harmful marine organisms in the coastal waters is gradually increasing due to factors such as rising sea temperatures resulting from climate change, coastal pollution, alterations in the structure of marine food webs, and habitat destruction caused by development. Therefore, in this Special Issue, we aim to address research findings on the chemical, physiological, and ecological interactions between organisms and the environment. It is well known that water pollution caused by various pollutants since the Industrial Revolution has significantly impacted the aquatic biota. Through this Special Issue, we anticipate the inclusion of comprehensive insights into past issues, recent toxicological concerns affecting human health, and insights into factors that could pose serious problems in the future. We hope that experts from various fields will participate to collectively address issues concerning humanity or ecosystems.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
