

Special Issue

Wetland Conservation and Ecological Restoration, 2nd Edition

Message from the Guest Editors

Since the onset of the Anthropocene, humanity's capacity to modify the environment, as well as our already existing impact on it, has dramatically increased. While these modifications have secured resources that are essential for socioeconomic development, they have also exacerbated ecological and environmental problems. The wetland environment is one of the systems most intimately connected with human society, making it particularly susceptible to severe stress from human activities. In the 21st century, wetland-related issues—manifesting in phenomena such as water quality deterioration, eutrophication, water body depletion, and loss of aquatic biodiversity—have alarmed the global community. These challenges are now prevalent worldwide, prompting the United Nations' Sustainable Development Goals (SDG 6) to emphasize water safety. Therefore, we invite you to contribute recent studies on the ecohydrological processes, environmental effects, and integrated regulation in wetland ecosystems related to wetland conservation and management.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
