

Special Issue

Climate, Water, and Soil, 2nd Edition

Message from the Guest Editors

This Special Issue of *Water*, entitled “Climate, Water, and Soil, 2nd Edition”, aims to identify, discuss, and address the above challenges by publishing research and review manuscripts dealing with climate monitoring and future climatic changes and the interactions of climate with resources (water and soil), hydrological cycles, and the critical biochemical cycles of carbon and nitrogen. Additionally, we will examine links between climate and natural and agricultural (crop) ecosystem productivity, resource quality, soil and water resource management, adaptation measures in the agricultural sector, water management to mitigate water scarcity and the degradation of water and soil resources, and issues affecting water use efficiency. In this Special Issue, the goal is for authors to respond to developing research on climate, water, and soil in a context that is sometimes missing in the mainstream literature on climate. About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
