

## Special Issue

# Sustainable Water Reuse and Water Economics

### Message from the Guest Editor

The issue of climate change requires us to adopt new approaches to water management to ensure the sustainability of this resource. The implementation of a strategy based on water reuse is key to ensuring its present and future availability. In this context, the wastewater treatment sector acquires special relevance to achieve the quality of the reclaimed water according to the requirements of each use. In this way, reclaimed water becomes a new alternative water resource that ensures the availability of water while reducing the pressure on conventional water supplies, guaranteeing this resource's sustainability.

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
