Interactions between Surface and Subsurface Water

Message from the Guest Editor

Groundwater is an important source of fresh water and is also widely used for irrigation around the world. Changes in the surface water quality can affect groundwater systems. These systems can also be influenced by extreme meteorological events (heavy rain, droughts, etc.), whose frequency is expected to increase in the near future. River and groundwater levels play a role in many ecosystems. Therefore, the assessment of the interactions between surface and subsurface water and a comprehensive understanding of their complex spatiotemporal dynamics are crucial. This Special Issue of *Water* is focused on the interactions between the surface and groundwater [...]. For further reading, please follow the link to the Special Issue Website at:

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
