

Special Issue

Assessment of Water Quality and Pollutant Behavior

Message from the Guest Editors

This Special Issue aims to explore the environmental behaviour of water elements and pollutants, the interaction between pollutants and aquatic organisms, and their ecological effects. This Special Issue conducts an in-depth and systematic cross-disciplinary research analysis on water environmental quality assessment (including environmental science and engineering, ecology, earth science, environmental chemistry, etc.). The research results can provide scientific basis and theoretical support for evaluating water quality and potential ecological risks of emerging pollutants. This Special Issue focuses on the assessment of water quality and pollutant behaviour, including (but not limited to) the following topics:

- An evaluation of water elements, such as carbon, nitrogen, and phosphorus;
- Environmental behaviours such as the migration and transformation of pollutants;
- Relationships between pollutant stress and ecological status;
- The synergistic ecological effects of water elements and environmental pollutants.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
