

Special Issue

Research on Water Resources Utilization Efficiency and Economic Development

Message from the Guest Editors

To achieve the sustainable development of water resources, we must begin with a rational exploitation of water resources. Consequently, it is necessary to develop a rational and appropriate measurement and assessment index system of regional economic coordination to evaluate water-resource utilization efficiency and economic development. In this context, researchers are invited to contribute to the Special Issue entitled “Research on Water Resources Utilization Efficiency and Economic Development”. Both original field and experimental research papers, review papers, as well as case studies, are invited for submission in the context of water-resource utilization efficiency and economic development. Keywords:

- water-resource management
- economic development
- virtual water
- water footprint
- aquatic ecosystem services
- carbon neutrality and marine resource management

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
