Contaminants of Emerging Concerns in the Water Environment: Sources, Fates, and Toxicity

Message from the Guest Editors

Contaminants of emerging concerns (CECs), such as antibiotics, hormones, personal care products (PCPs), endocrine-disrupting compounds (EDCs), pharmaceuticals (PhACs), per- and polyfluoroalkyl substances (PFASs) and their transformation products, that occur at trace levels in treated wastewater is of concern for human health and the aquatic ecosystem.

Due to the rapid development of CECs in the environment, implementing cost-effective and sustainable detection, risk assessment, and removal programs for all these elements is difficult. In the meantime, CECs have become a challenge in sustainable water management, where climate change and population growth exacerbate water source issues.

The aim of this Special Issue is to bring together recent research and reviews on CEC-related research advancements in the water environment including their occurrences, fate and transport behaviour, as well as discussions around the toxicity level of CECs. We also encourage the submission of research needs and toxicological studies that implement efficient and ecological methods for their removal, which help to control CECs in freshwater ecosystems.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
