

## Special Issue

# Quality of Coastal Areas: Marine Pollution and Aquatic Toxicology

### Message from the Guest Editors

This Special Issue, entitled “Quality of Coastal Areas: Marine Pollution and Aquatic Toxicology”, intends to discuss the presence, fate and behaviour of contaminants in marine environments, their uptake by the biota, and the ecotoxicological effects that such substances may have on marine organisms and ecosystems, particularly considering the various levels of biological organization. It also aims to consider various mixtures of contaminants, and the interactions between contaminants and other stressors, in the context of climate change. This Special Issue intends to gather the latest advances worldwide and to foster a sound discussion about marine pollution and its ecotoxicological effects on marine and coastal ecosystems. The submission of innovative articles that integrate the contamination of marine, coastal areas and nearby river basins and estuaries with the environmental behavior, fate and hazard of contaminants of emerging concern is encouraged.

### Guest Editors

Dr. Denis Abessa

Department of Biological and Environmental Sciences, São Paulo State University (UNESP), Santos 11330-900, SP, Brazil

Dr. Roberto Martins

CESAM—Centre for Environmental and Marine Studies and Department of Biology, University of Aveiro, 3810-193 Aveiro, Portugal

### Deadline for manuscript submissions

closed (25 December 2023)

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
