

Special Issue

Advanced Oxidation Technologies for the Removal of Refractory Organic Contaminants in Water and Wastewater

Message from the Guest Editors

We will publish studies focused on either classical or novel advanced oxidation technologies (e.g., UV/H₂O₂, O₃-MNBs), and the target contaminant will trace organic contaminants in water sources or recalcitrant organics from industrial wastewater. Both original research and review articles are welcome. Keywords

- UV-based advanced oxidation process
- ozone-based advanced oxidation process
- Fenton/Fenton-like process
- trace organic contaminants
- recalcitrant organics
- kinetics and mechanism
- toxicity evaluation
- energy cost
- reactor performance

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
