Special Issue

Constructed Wetlands: Enhancing Contaminant Removal and Remediation

Message from the Guest Editors

Constructed wetlands are engineered ecosystems designed to mimic natural wetlands, offering sustainable solutions for water treatment and environmental remediation. This Special Issue explores recent advancements and innovative approaches to enhance the performance of CWs in removing and remediating contaminants. Innovative strategies, such as integrating microbial fuel cell (MFC) technology with CWs, are highlighted for their potential to simultaneously treat wastewater and generate electricity. By bridging research and practice, this Special Issue aims to advance the understanding and application of CWs as versatile, eco-friendly systems for mitigating global water pollution challenges. Researchers, engineers, and policymakers are invited to explore these cutting-edge contributions to shape the future of sustainable water management.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
